

engineered to last up to 1-year

Upgrade to tna robag® Long Life Knives and Anvils

Experience next-level performance with this exclusive range of Long Life knives and anvils from TNA – purpose-built for tna robag® rotary jaw systems. Delivering significantly extended service life, these upgrades help reduce maintenance, cut operational costs, and maintain consistent product quality - so your packaging lines can keep moving.

Up to 6x* the lifespan of standard knives

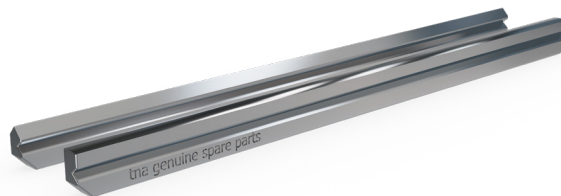

Imagine running for up to one year on a single knife and anvil without having to replace it - no surprises, and consistent cutting day after day.

One Long Life set replaces up to six standard sets, cutting downtime, labour, and consumable costs in a single upgrade.

With a proven lifespan of up to 12 months and just one shim required, you get fewer interventions, fewer stoppages, and dramatically lower cost per kilo - without compromising cut quality or product consistency.

Designed for tna robag® rotary jaws

Engineered for tna robag® 2B, 2C, 3, 3ci and 3e rotary jaw systems, the Long Life knives and anvils integrate easily - no modifications required.

Benefits at a glance

- » Up to one-year operational life.
- » Up to 6x* longer life than standard knives.
- » Significantly reduces downtime, labour, and part spend.

Smarter investment. Faster payback.

With fewer replacements and reduced labour, TNA Long Life knives and anvils pay for themselves - fast. It's a simple upgrade that delivers long-term savings and measurable improvements to OEE.
